

Adobe Experience Manager

Administer and Securely Maintain Adobe Experience Manager

Course description: Administer and Securely Maintain Adobe Experience Manager (formerly known as AEM System Administrator) is a three-day, instructor-led (classroom and virtual) course, where you will learn how to configure, maintain, and troubleshoot Adobe Experience Manager. This course will cover Adobe Experience Manager files and directory, and will show you how to find important log files and adjust the logging configuration. Along with hands-on exercises, participants will learn about Dispatcher, Mongo DB, SSO, LDAP, user administration, security, and performance tuning.

Prerequisites:

- A minimum two years of system administrator experience with the operating system or platform on which Adobe Experience Manager will be installed
- Basic knowledge about Java technology, XML, HTTP protocol, networking, network design, Mongo DB, and server-specific software

Target audience: This is a highly technical class, designed specifically for System Administrators.

Objectives

After completing this course, you should be able to:

- Explain the Adobe Experience Manager architecture stack
- Install Adobe Experience Manager
- Manage Package Manager
- Configure OSGi components in Adobe Experience Manager
- Manage log files in Adobe Experience Manager
- Monitor and maintain Adobe Experience Manager performance
- Configure and manage the dispatcher
- Monitor operations dashboard
- Manage deployments
- Explain key concepts related to Apache Oak
- Perform maintenance tasks such as backup and restore data
- Manage users and groups
- Integrate LDAP and SSO
- Monitor performance
- Explain security Features

Course Materials

- Administer and Securely Maintain Adobe Experience Manager Training Student Workbook

TOPICS

- Basics of the Architectural Stack
- Authoring Basics
- Exploring the Administrative Interfaces
- Working with Content Packages
- Configuring OSGi Components
- Managing Log Files
- Operations Dashboard
- Replication
- Dispatcher
- Understanding Apache Oak
- Recommended deployments
- Maintenance
- Managing Users, Groups, and Access Rights
- Integrating with LDAP and Enabling Single Sign-On
- Performance Tuning
- Security Features
