Advanced Forms Workflow

Course description: Advanced Forms Workflow is an instructor-led classroom or virtual course where you will learn to create custom workflow steps and custom OSGi services. Although you can create AEM Forms workflows with the out-of-the-box Forms Workflow steps, many organizations need to supplement these capabilities with custom Java development. This course shows how to combine the standard Forms Workflow activities with your own custom workflow steps to create sophisticated workflow solutions.

Students will learn how to create Maven projects and compile their projects as OSGi bundles to an AEM server. Students will also learn how to create custom workflow steps and integrate these steps with the services in their bundles.

Prerequisites: AEM Forms Workflow

Objectives:

After completing this course, you will be able to:

- Use custom workflow steps in a workflow model.
- Create a custom TouchUI workflow step.
- Create a custom user look-up workflow step.
- Configure the AEM Plugin for Eclipse.
- Create an AEM Project with Maven.
- Manage and customize POM files for your project.
- Compile and deploy OSGi bundles to AEM.
- Integrate custom workflow steps with the custom services in your bundles.
- Trouble-shoot workflow issues.

Course Materials

- *Advanced Forms Workflow Student Manual*

AUDIENCE

- Developers who need to supplement the *out-of-the-box* workflow steps with custom steps to create sophisticated AEM Forms workflows.

PRODUCT VERSIONS

- AEM Forms 6.5+

LENGTH

- 1 day
