

Adobe Experience Manager

AEM Forms and Databases OSGi

Course description: Integrate your AEM forms with databases such as Microsoft SQL Server, and Oracle's MySQL. This course shows you the secrets of integrating AEM adaptive/responsive forms with your company's databases and other data sources including REST and SOAP services. In addition to learning concepts and theory about AEM Forms and data, you will complete hands-on exercises. You will create data sources, form data models, and adaptive forms based on form data models.

The Adobe Form Data Model

- Configure AEM Forms with Microsoft SQL Server and Oracle's MySQL
- Create data sources for Microsoft SQL Server and Oracle's MySQL
- Create a data source for a REST Service
- Create a data source for a SOAP Service
- Creating Form Data Models with the Form Data Model Editor
- Configure services in your Form Data Models
- Create associations in your Form Data Models
- Understand the fundamentals of JSON
- Create adaptive forms based on Form Data Models
- Prefill a form with data on the initialize event
- Update data from your form to the data source
- Submit new records from your form to the data source
- Submit form data in JSON format
